# STEAM INJECTION OPERATION PROCESS

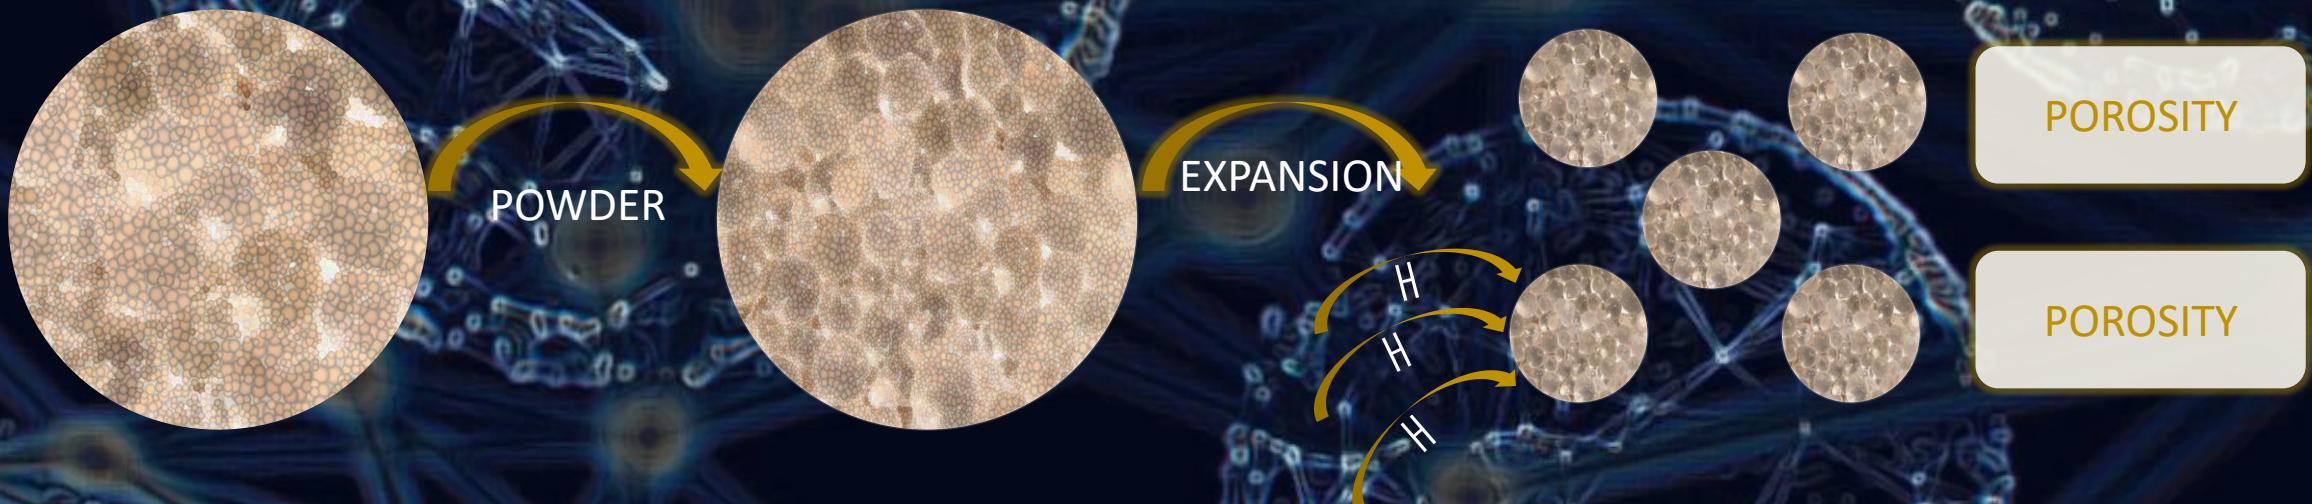

## M A R K E T P R A C T I C E - V A C U U M I N S U L A T E D T U B I N G - V I T

VIT TECHNOLOGY –  
THERMAL EFFICIENCY

## WHAT IS OUR NANOTECHNOLOGY?

With the nanotechnology insulation employed in the **STIS** manufacturing process, hydrogen can not contaminate the insulating media, due to the low porosity of expanded SILICA, therefore the thermal efficiency remains constant for **10 YEARS** – while the vacuum decreases linearly for 5 years.

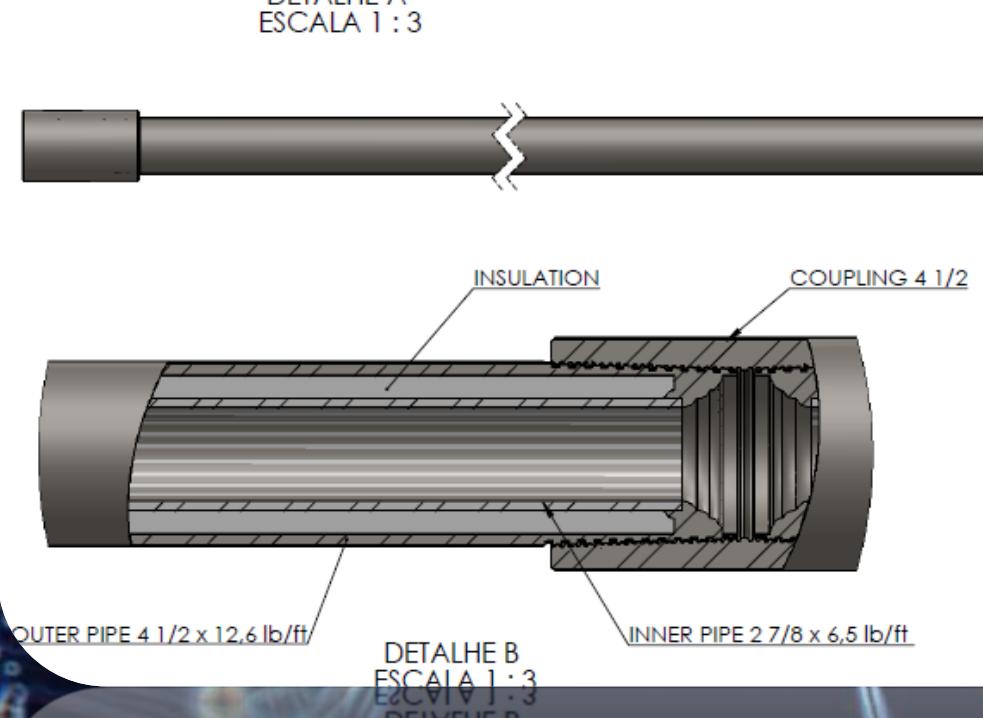

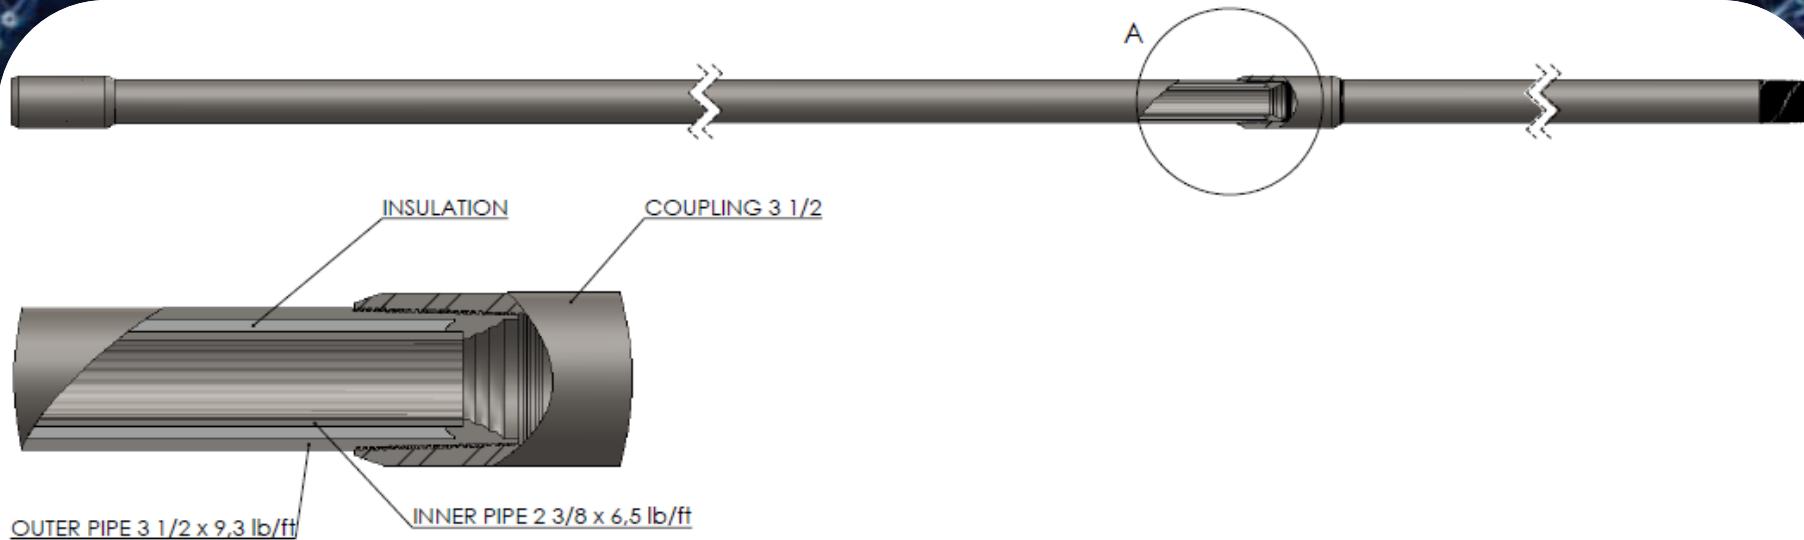

## VIT (vacuum) X STIS (Nanotechnology) – Efficiency vs. Service Time

EFFICIENCY (%)

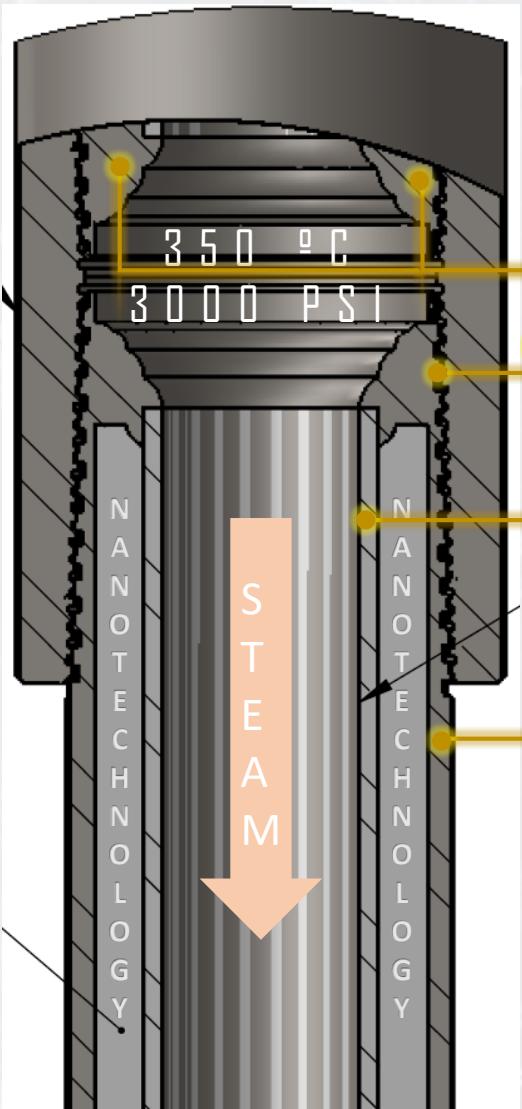

■ VIT ■ STIS

# SIAO TECHNOLOGY

# STIS TECHNOLOGY

INNER PIPE = 360 °C  
OUTER PIPE = 80 °C

Our technology is in the welding process. the addition of alloying elements increases the welded joint limit of elasticity, this process protect the tube from the thermal fadigue. this ensures a longer life of STIS.
